

CipherLabs 1564A Scanner

Getting Started

The **CipherLabs 1564A Bluetooth Scanner** is preprogrammed at our office and **should function with The Edge directly out of the box**. The scanner ships with its Bluetooth connection already paired to its base.

If you need to pair it directly to a computer, for example if you are using it with a mobile tablet, please contact Support.

To set it up:

1. Plug the cord into the scanner's base and connect it to your computer's USB port.

2. In The Edge, click **Administrative > Configuration**.
3. In the **Barcode Scanner Settings** section, use the drop-down to set **Barcode Scanner Type** to **STX_ETX**.

4. Click **OK** to save changes.
5. The scanner is now set up and ready for use. Test it by scanning inventory barcodes, receipts, envelopes, etc.

Troubleshooting

If the scanner does **NOT** work, follow these instructions to program it and pair it with its base.

Programming

Scan the following barcodes in the order presented to program the scanner. If you make a mistake, start again from the first barcode.

Enter Setup

Restore Default Settings

(Optional) Beeper Volume: Min

Update

Pairing Scanner with Base

On the bottom of the base, scan the top barcode (Set Connection), then scan the bottom barcode (BNF).

The scanner is now set up and ready for use. Test it by scanning inventory barcodes, receipts, envelopes, etc.
